

Fluctuation relations and time irreversibility : an electric circuit implementation

Chi-Lun Lee

Department of Physics, National Central University, Jhongli 32001, Taiwan

We study experimentally and theoretically the stochastic dynamics of voltage fluctuations in simple electrical circuits. In particular we focus on their nonequilibrium steady states (NESS). The essences of the fluctuation relations, time irreversibility, and the probabilistic description of dissipation entropy production will be discussed and re-examined through these electrical systems.
